What we believe

We believe that Design, Technology, Food, Catering and Horticulture provide problem solvers of the future. A Park Design and Technologist innovates solutions through theoretical and practical application to develop creatively products from conception to conclusion. A learner's problem solving ability is vital in employment and further education as well as working collaboratively in a team. A successful Design and Technologist can adapt their practise to work more efficiently, be decisive in their approach to learning new skills whilst applying them in education and in 'real life' situations. We believe that these skills will enhance our ambition for our learners to strive for excellence.

Aims and Vision

What Design and Technology aims to provide for our students?

Design and Technology prepares pupils to engage with rapidly changing technologies as well as challenging current designs so that students can creatively improve standards and solve real life problems. Our aim is to provide a rich and challenging curriculum that ensures all pupils will have the opportunity to produce excellent work by pushing their own boundaries and exploring their creativity. Design and Technology teaches students to learn about a wide range of materials, processes, and manufacturing techniques. Pupils will become proficient in joining materials, developing drawing techniques, critiquing designed products and create effective products, dishes, and outcomes. Design and Technology enables our students to combine practical skills with an understanding of aesthetics, social, environmental issues functional and industrial practices.

Curriculum Intent

Design and technology is an inspiring, rigorous, and practical subject. Students studying it will use their creativity and imagination to design and make a range of products that solve a variety of issues. Whilst designing students will consider other individuals needs as well as their own to produce the most effective outcome. Design and Technology requires a broad subject knowledge that draws upon other areas of the curriculum, for example, science engineering and maths. Pupils learn how to take risks and are required to design innovatively to produce new and interesting products and concepts.

All pupils will develop their creative, technical, and practical skills to be able to partake in using new technologies successfully. Students will need to develop their knowledge and understanding of the subject so that they are able to design high quality products and prototypes for a variety of end users. Most importantly students will need to learn to have a critical eye when looking at existing product to analyse their strengths, weaknesses and suggest possible improvements as well as evaluate the successfulness of their own work.

Curriculum Implementation

Students will learn why conducting extensive research from a range of cultures and being able to understand a variety of needs is important when designing.

Being able to produce a design brief and understanding the how this is used in industry will enable students to keep their design focused and relevant.

Effective problem-solving skills are vital for the students to critique their work and give careful thought about how this item could be developed of further changed or improved.

Students will learn a variety of hand skills with tool and machine processes, this will enable them to create an item/prototype/product that will fit within their specification parameters and show their skill.

A range of materials will be considered and will enable students to be critical but

selective with their decision-making process to create an outcome.

Analysis of past and present designs will assist the students in understanding the limitations and possibilities that designing and creating can present.

Testing and learning about new technologies are important parts of students learning as this will enable students to show that they are becoming thoughtful designers. They will use their knowledge and responsibility as an environmentally considerate designer to create a sustainable product.

Whilst developing their skills student will need to be able to describe why a good technical understanding will help them to create a more effective outcome.

Year 7 Design and Technology transition curriculum

Year 7 Design and Technology at Park is designed to enable our students to make a successful transition from Key Stage 2. Students will study three main areas. Our Core curriculum where students are learning the foundations of the subject. Design and Technology where students are learning the design process and health and safety legislation whilst using new equipment. They will also study Food and Catering including health and hygiene basics and cooking skills.

For an in-depth review of specific topics that will be learnt this year please click [here](#).

Year 8 Design and Technology curriculum

Year 8 Design and Technology students' study DT, Hospitality and Catering and Graphics. This is a skills-based year where students will design and create a few products as well as learn new cooking skills. The aim of this year is to allow students to practise skills whilst trying to refine their work to improve its quality. There is a larger emphasis on the theoretical work to ensure that students are fully prepared for GCSE, but we are fully supportive of teaching practical skills for life.

For an in-depth review of specific topics that will be learnt this year please click [here](#).

Year 9 Design and Technology curriculum

Year 9 Design and Technology students' study Design and Technology, Graphics and Hospitality and Catering. This is another skills-based year but where students try to master the skills learnt in year 7 and 8. This will also be an opportunity to learn new higher-level skills to prepare them for their GCSE years. The main aim of this year is to allow students to have time to practise and really refine their skills to develop their final outcomes and appreciate the need for a quality product. There is a larger emphasis on three areas for DT. They are Research – Analyse – Respond. This will support their practises in GCSE Art and Design. Students learning construction will learn skills for life as well as preparing them for Level 2 Construction in Multi-trades.

Dishes cooked in Catering will be presented to a higher standard to ensure that all health and hygiene rules apply in more complex dishes. This preparation will allow students to succeed in their vocational qualification in Hospitality and Catering.

GCSE Art and Design; 3D Design Modules

Three-dimensional design is defined here as the design, prototyping, and modelling or making of primarily functional and aesthetic products, objects, and environments, drawing upon intellectual, creative, and practical skills. Students are taught many different skills to prepare them for the 3 modules that they must complete to pass this course.

Module 1, A mini project showing their designing skills and developing them.

Module 2, A design and make project of the student's choice.

Module 3, A design and make project that is stipulated externally with a 10hour making exam.

Within the context of three-dimensional design, students must demonstrate the ability to: use three-dimensional techniques and processes, appropriate to students' personal intentions, for example:

- model making
- constructing
- surface treatment
- assembling
- modelling

use media and materials, as appropriate to students' personal intentions, for example:

- drawing materials
- clay
- wood
- metal
- plaster
- Plastic

For an in-depth review of specific topics that will be learnt this year please click [here](#).

Year 10/11 – GCSE Art and Design; 3D Design

Areas of study

In Module 2 and Module 3 students are required to work in one or more area(s) of three-dimensional design, such as those listed below:

architectural design
sculpture
ceramics
product design
jewellery and body adornment
interior design
environmental/landscape/garden design
exhibition design
3D digital design
designs for theatre, film, and television.

Students may explore overlapping areas and combinations of areas. Students must develop and apply the knowledge, understanding and skills specified in the Subject content to realise personal intentions relevant to three-dimensional design and their selected area(s) of study. The following aspects of knowledge, understanding and skills are defined in further detail to ensure students' work is clearly focused and relevant to three-dimensional design.

Knowledge and understanding

The way sources inspire the development of ideas relevant to three-dimensional design including:

how sources relate to historical, contemporary, cultural, social, environmental, and creative contexts

how ideas, feelings, forms, and purposes can generate responses that address specific needs be these personal or determined by external factors such as the requirements of an individual client's expectations, needs of an intended audience or details of a specific commission.

The ways in which meanings, ideas, and intentions relevant to three-dimensional design can be communicated include the use of:

figurative and non-figurative forms of representation, stylisation, simplification, exaggeration, the relationship between form and surface embellishment, constructional considerations, and imaginative interpretation
visual and tactile elements such as: colour, line, form, tone, texture, space, proportion, decoration, scale, structure, shape, and pattern.

GCSE Art and Design; Graphic Communication Modules

Graphic communication is defined here as the process of designing primarily visual material to convey information, ideas, meaning and emotions in response to a given or self-defined brief. Students are taught many different skills to prepare them for the 3 modules that they must complete to pass this course.

Module 1, A mini project showing their designing skills and developing them.

Module 2, A design and make project of the student's choice.

Module 3, A design and make project that is stipulated externally with a 10hour making exam.

Within the context of graphic communication, students must demonstrate the ability to: use graphic communication techniques and processes, appropriate to students' personal intentions, for example:

- typography
- illustration
- digital and/or non-digital photography
- hand rendered working methods
- digital working methods

use media and materials, as appropriate to students' personal intentions, for example:

- pencil, pen and ink, pen and wash, crayon, and other graphic media
- watercolour, gouache, and acrylic paint
- layout materials
- digital media
- printmaking
- mixed media

For an in-depth review of specific topics that will be learnt this year please click [here](#).

Link to examination board specification

<https://www.aqa.org.uk/subjects/art-and-design/gcse/art-and-design-8201-8206>

Year 10/11 – Art and Design; Graphic Communication

In Module 2 and Module 3 students are required to work in one or more area(s) of graphic communication, such as those listed below:

- communication graphics
- design for print
- advertising and branding
- illustration
- package design
- typography
- interactive design (including web, app, and game)
- multi-media
- motion graphics
- signage

Knowledge, understanding and skills

Students must develop and apply the knowledge, understanding and skills specified in the Subject content to realise personal intentions relevant to graphic communication and their selected area(s) of study. The following aspects of knowledge, understanding and skills are defined in further detail to ensure students' work is clearly focused and relevant to graphic communication.

Knowledge and understanding

The way sources inspire the development of ideas relevant to graphic communication including:

how sources relate to a given or self-defined brief which might, for example, have a commercial, social, or environmental focus or be concerned with other aspects specific to the creative industries

how ideas, themes, forms, issues, and needs can provide the stimulus for creative, imaginative, thoughtful, and appropriately focused responses that are fit for a specific intended purpose.

The ways in which meanings, ideas, and intentions relevant to graphic communication can be communicated include the use of:

different forms of representation, brand identity, intended message, target audience and working within parameters determined by client and/or audience expectations and requirements. Visual and tactile elements, such as: colour, line, form, tone, texture, shape, pattern, composition, stylisation, simplification, scale, structure.

Skills

Within the context of graphic communication, students must demonstrate the ability to:

use graphic communication techniques and processes, appropriate to students' personal intentions, for example:

typography

illustration

digital and/or non-digital photography

hand rendered working methods

digital working methods

use media and materials, as appropriate to students' personal intentions, for example:

pencil, pen and ink, pen and wash, crayon, and other graphic media

watercolour, gouache, and acrylic paint

layout materials

digital media

printmaking

mixed media.

WJEC (EDUQAS) Hospitality and Catering Spec A

The hospitality and catering sector includes all businesses that provide food, beverages, and/or accommodation services. This includes restaurants, hotels, pubs and bars. It also includes airlines, tourist attractions, hospitals, and sports venues. businesses where hospitality and catering is not their primary service but is increasingly important to their success. According to the British Hospitality Association, hospitality, and catering is Britain's fourth largest industry and accounts for around 10% of the total workforce. Since 2010, over 25% of all new jobs have been within the hospitality and catering sector with most new roles falling within the 18-24 age group, according to a report by People 1P. This is a reason why we feel very strongly about offering these skills for life to our students to give them the best chance when they leave Park.

Level 1/2 Vocational Award in Hospitality and Catering provides learners with a core depth of knowledge and a range of specialist and general skills that will support their progression to further learning and employment.

Students will gain Knowledge and understanding of the hospitality and catering industry. They will be able to develop the ability to plan, prepare and cook dishes as well as develop their practical skills for the catering industry.

Main topics students' study:

- Students will follow a course to further their skills in all aspects of catering. They will develop a better understanding of Hygiene and Safety when working in an industrial kitchen and when dealing with the public.

- They will be introduced to Catering terminology and job roles within Catering, with a view to being able to work in the Hospitality industry.

- All aspects of food preparation are covered with a view to developing skills such as food preparation, cooking and presentation of a wide variety of dishes.

- They will be shown how to use a wide range of fresh and pre-made commodities and be able to cater for small numbers.

- Nutrition will be covered in greater depth to increase the students' knowledge of different diets with reference to medical, ethical, and religious needs.

- During practical sessions different cooking methods e.g., creaming, whisking, baking, and steaming will be practised and developed. Students will be encouraged to present food well and understand the importance of this.

- They will also develop the skills needed to plan and cost meals.

For an in-depth review of specific topics that will be learnt this year please click [here](#).

<https://www.eduqas.co.uk/qualifications/hospitality-and-catering/>

Year 10/11 WJEC (EDUQAS) Hospitality and Catering Spec A

Students in year 10/11 Hospitality and Catering will be completing their Controlled Assessment work from Sept until December. This includes a 9-hour Internal Assessment that is worth 60% of the overall grade. The criteria for this part of the course are below.

LO1 AC 1.1 MERIT

Describe the functions of nutrients in the human body.

LO1 AC 1.2 DISTINCTION

Compare the needs of specific groups.

LO1 AC 1.3 MERIT

Explain the characteristics of unsatisfactory nutritional intake.

LO1 AC 1.4 PASS

Explain How Cooking Methods Impact On Nutritional Value Of Food

LO2 AC 2.1 MERIT

Explain Factors To Consider When Proposing Dishes For A Menu

LO2 AC 2.2 PASS

Explain How Dishes On A Menu Address Environmental Issues

LO2 AC 2.3 MERIT

Explain How Menu Dishes Meet Customer Needs

LO2 AC 2.4 DISTINCTION

Plan production of dishes for a menu.

LO3 AC 3.1 DISTINCTION

Use Techniques In Preparation Of Commodities

LO3 AC 3.2 MERIT

Assure Quality Of Commodities To Be Used In Food Preparation

LO3 AC 3.3 DISTINCTION

Use Techniques In Cooking Of Commodities

LO3 AC 3.4 DISTINCTION

Complete Dishes Using Presentation Techniques

LO3 AC 3.5 MERIT

Use Food Safety Practises

From January until June students will be completing revision topics in preparation for the External Assessment that is worth 40% of the overall grade. The criteria for this part of the course are below.

LO1 Hospitality and catering industry

LO1 Requirements

LO1 Working conditions

LO1 Factors

LO2 Operation

LO2 Customer

LO2 Requirements

LO3 Responsibilities

LO3 Risks

LO3 Control measures

LO4 Causes

LO4 EHO

LO4 Legislation

LO4 Food poisoning

LO4 Symptoms

LO4 Food induced ill health

LO5 Hospitality and catering provision

For an in-depth review of specific topics that will be learnt this year please click [here](#).

APEX – Laser Level 1 and 2 Certificate for Learning, Employability and Progression in Multi-trades

Main topics students' study:

To achieve the LASER Level 2 Certificate for Learning, Employability and Progression the learner must achieve a minimum of 25 credits. The credits may be taken from any combination of units but a minimum of 20 credits must be at Level 2.

Here at Park community school, we also offer the above course with specific credits awarded in different construction skills. These skills are delivered at our APEX construction skills centre in Leigh Park, Havant. This course is offered to students at Park Community School, and it is also offered to other secondary schools in the local area.

Level 1 Skills list include.

- Introduction to a training course
- Health and Safety
- Measure Distance Length
- Brickwork
- Carpentry and Joinery
- Carpentry Hand Skills
- Painting and Decorating skills
- Plastering
- Wallpapering

Level 2 Skills list include.

- Health and Safety in construction
- Brickwork
- Carpentry and Joinery
- Carpentry Hand Skills
- Timber in Construction
- Painting and Decorating skills
- Plastering and Wallpapering
- Finance

For more information, please contact Daniel Payne, Head of Design and Technology and oversight of APEX centre.

Horticulture

Horticulture at Park Community School prepares students to engage with a rapidly developing Horticultural industry, where students can learn theory-based knowledge about plant families, soil types, plant foods and pollinators (relevant to the wider Horticultural industry), current industry practice in propagation, whilst developing practical and creative design skills, to a certified standard.

Intent

Our aim is to offer a rich, challenging, varied curriculum that ensures all students will have the opportunity to produce excellent work by pushing their own boundaries and exploring their creativity through real-life opportunities that foster skills develop, confidence, independence, and resilience.

Horticultural students will develop knowledge and skills to certification level, in a wholly different learning environment inside and out, where skill in plant and seed propagation, vegetative propagation and ornamental plant cultivation will be taught and developed further, so that students can develop their own creative ideas, which are crucial in a modern economy, but often in short supply.

The work plan is aimed at practical and theory work to stimulate students' intellectual curiosity and offer real-life opportunities for them to develop horticultural skills, work collaboratively, and become confident, independent learners.

Implementation

The knowledge and skills that students develop through their learning in horticulture is designed to open pathways to a wide range of career opportunities, both in the locality and elsewhere. These pathways can lead to careers as varied as Horticultural consultant, turf manager, landscape designer, Landscape gardener, Vegetable farmer, Plant scientist, Market gardener, Specialist gardener, forestry worker, and florist. They can also lead to related fields such as scientific research, and food processing.

Exam Board

Royal Horticultural Society City & Guilds.

Type of Qualification

City & Guilds Level 1 & 2 Award in Practical Horticulture (or GCSE)

Areas of Study

- Preparing soil for sowing and planting.
- Soil testing.
- Assist with the propagation of plants from seed.
- Assist with the vegetative propagation of plants.
- Assist with planting and establishing plants.

Identification of a range of common garden plants, weeds pests and diseases.

Assessment

Assessment is by means of a range of practical activities timetabled and assessed based on the City & Guilds success criteria.

Further study and Career opportunities

The City & Guilds Level 1 Award in Practical Horticulture qualification has been approved within the Qualifications and Credit Framework. As part of the Foundation Learning tier this qualification provides a new and flexible learning programme for young people working at level 1. It helps learners develop their horticultural potential and prepares them to progress towards level 2 qualifications offered by City & Guilds Qualifications and other awarding organisations.

Careers

The horticultural industry is one of the largest employers in the UK. A career in horticulture could mean anything from a hands-on gardener to a research scientist. There are many, many opportunities out there.

- Green keeper
- Gardener - Horticulturalist
- Arboriculturist
- Florist
- Environmental scientist
- Horticultural journalist
- Vegetable grower
- Garden Centre Manager
- Landscape Contractor
- Landscape Architect
- Park Ranger
- Plant Breeder
- Soil Scientist

Impact

Our pupils having completed our curriculum are more prepared for life past Park Community School because the problem-solving skills they have learnt are enabling them to be more creative and approach problems with an 'out of the box' solution. Our students are independent, organised, and can use machinery confidently. They will have used a small selection of industry standard equipment; this will give them the confidence when working in their future. Our curriculum is progressive and broad enabling our students to have a good knowledge of a variety different specialisms like, Construction, Hospitality and Catering, Design and Model Making, therefore giving our students a range of career paths. Our students leave with a broader cultural capital as in addition to our curriculum we offer a diverse range of extracurricular activities and competitions. We believe that our curriculum gives our students the 'Practical Skills For Life' that they need to be successful in their future.

[illegible]

A stylized illustration of a person's head in profile, facing right. The head is light brown with a large, dark brown eye. The hair is red. Surrounding the head are various icons: a gear with the word 'THINK!!!' above it, a lightbulb, a magnifying glass, a gear with the word 'LEARN' below it, a brain, and a red speech bubble with the word 'IDEAS' inside. The background is teal with small white gears.

Design and Technology @ Park

HOD – Daniel Payne (Catering and Graphics)

Teachers – Andy Green (Design Technology), Gerard Bye (Horticulture)

Instructors – Tony Cushion (Catering), Doug Davies (Construction)

We believe that Design & Technology subjects provide problem solvers of the future. A learner's problem-solving ability is vital in employment and further education as well as working collaboratively in a team. A successful Design and Technologist can adapt their practise to work more efficiently, be decisive in their approach to learning new skills whilst applying them in education and in 'real life' situations. Design and Technology at Park consists of five members of staff that all teach within their specialism and with high expectations. The team consists of three qualified teachers and two instructors that are supported through the coaching program and tuition with HOD. Teaching across the department has been identified as good or better. This is monitored by Red Lines and Performance Management. DT @ Park gives students 'Skills for Life'.

INTENT

- Enable students to gain Skills for Life
- Enhance students Cultural Capital
- Inspire students to become real life problem solvers
- Develop student's 'Critical' eye

IMPLEMENTATION

- Keyword's bank – with support from KS2 transition (Project led by AGr/TCu with feeder schools)
- Ambitious fluid curriculum that is supported by subject rotations with learning Tutors assigned. (New KS3 rotation to allow for skills building in yr7/8 and skill development with an opportunity to specialise in yr. 9)
- Reading Tasks developed by subject specialists to support literacy levels but DT Cultural Capital content.
- Use of WAGOLs created by specialists to promote high expectations of students
- SOWs adjusted to suit Great Learners model including an emphasis on the 'Practise' Element
- MCQ Home learning to test knowledge learnt in lessons and review at end of terms to promote retrieval practise
- Increased option choices for GCSE. Now includes Art and Design 3D, Art and Design Graphics, Hospitality and Catering, Construction skills – (Multi trades) and Horticulture.
- Lessons provide a balance of theoretical and practical elements that suit both 'skills for life' and GCSE examinations.
- Department Teaching folders (Yellow folders) to support midterm planning and adaptive planning based on SEN and assessments of specific groups.
- Department Portal (student hub) – online curriculum with 'virtual teaching' to support absent students during Covid pandemic.
- Careers Corridor and Portal Page to support students with their future

IMPACT

- Students enjoy Design and Technology subjects and feel confident in taking the skills learnt onwards past Park.
- GCSE Results are constantly improving. All subjects now above national Average 4+.
- Home learning Multiple choice has helped to support learning and uptake has increased on average 27% across all years.
- Students have obtained 'Skills for life'.

Department CPD

- WAGOLL creation using support from HOD
- GCSE standardisation
- Possible career paths
- Creation of Student portal
- Review of Academic Tutor role and fluid KS3 Rotation

1 Teaching

- Establish Routines
- Increased Independence
 - Computing hub
 - Digital lesson resources for class and home learning
- Focused assessment
 - MCQ's
 - Termly assessments
 - KS4 thresholds
- Teaching revision strategies throughout curriculum.
- Home learning
 - Low stakes MCQ's
 - For the love of
- Personalised CPD based on work scrutiny actions

2

Targeted academic support

- Testing Early Sept 2021
- Reading intervention 30 Sept onwards
- KS4 test- intervention- retest cycle Sept 2021 onwards. **Threshold testing**

3

Wider strategies

- Period 6 for GCSE
- SMSC incorporated throughout
- Adapt KS3 curriculum for specific groups
- Academic trips or visitors

Student misconceptions of key themes will be reduced	Time to create questions on a fortnightly basis.

Final Report – Draft

Subject leader Interview

The subject leader confidently described a curriculum encompassing an explicit process of design-practise and review, which is embedded across disciplines from year 7 to 11. The curriculum is well planned, progressive and links across disciplines are well thought through. The team's overarching aim of developing 'skills for life' is certainly encompassed through the range of opportunities and experiences the team offers.

The team consists of specialists in their field, and this is a real strength. Across graphics, catering, construction, design technology and horticulture, the subjects are taught by skilled professionals with a real passion for their field. The number of students opting for Technology subjects, particularly catering and construction, remain high.

Graphics development has been a real strength- examples shared by the subject leader of curriculum design and explicit teaching of process demonstrated high expectations of both process and knowledge. This is something that the subject leader will develop across the other disciplines within technology. This process is linked to that used by Visual Arts and therefore the skills are transferable.

The team have a strong system for tracking progress at Key Stage 4 and as a result all teachers know exactly where students are within the course, what they are likely to achieve and what they need to do to improve. This is regally shared with students. In some cases expectations are not high enough however and too many students are satisfied with a pass on courses where they could achieve a distinction. This is an area of focus for the team. but

Links to careers is a strength of team, on the student area of the school's website, displayed in the department but also explicit in lessons are the links to various career pathways and students can speak confidently about these. |

The team are also proud of their Green power racing team who regularly compete in he national racing circuit.

Learning Walks

Curriculum at Key Stage 3:

A total of 10 key stage 3 lessons were observed over the week from across each discipline. Lessons demonstrated high levels of subject knowledge from staff and a passion for their subject. Across lessons real life context and scenarios were used to give purpose and big picture to students. For example, within food the students were health inspectors, with the lesson focus on hygiene standards. A video of cleaning an industrial kitchen was used to explore cross contamination and support them with their assessment questions. Students were very proud of their work and keen to show their version of 'perform' to visitors in both theory and practical sessions (creations, portfolios, and book work). They were able to clearly articulate the task set and their vision.

In a year 7 technology lesson students were all participating in their practical design of mobile phone holders. Most were proud of what they had/ were producing. They love the practical but do not explicitly connect this to their design. Students knew they had planned but did not use their plan during production.

All talked very confidently about the safety rules they had learned and could explain these well. This tended to be their focus when asked about what they had been or were learning. Some students were keen to explain their learning about the drills and selecting different parts dependent on the size of hole required. All students felt the teachers' modelling was helpful, but a few said it is sometimes difficult to see from the back of the group.

In most practical lessons the level of independence was high by the students, and it was good to see them assisting/teaching one another with the machines.

Great Learners was referenced within many sessions and used explicitly within Graphics where the students had worked in 'prepare' where they were questioned about line making, 'practise' with a tone and texture skill task, before completing 'perform' where they applied a selected of practised line techniques to a camera. Practise was also seen in some lessons where students were planning idea boards prior to creating their final piece.

Within Horticulture real life context was consistent and made focus relatable. Tasks developed students need to think hard, identify, explain, and justify within their responses. Books showed pride and clearly applied marking.

Students were less clear on their working grade or the success criteria for WT/ARE/AGD, consequently they were unsure on how to improve. The head of department showed an example of a WAGOLL for theory/portfolio work during the leadership interview, but this was only seen in his lessons during the observations. This is a new strategy for the team and once used more consistently will raise the standards further for Key Stage 3 and prepare students for the course structure of Key Stage 4.

Curriculum at Key Stage 4:

A total of 6 Key Stage 4 lessons were observed over the week from across each discipline.

Students have fantastic opportunities within technology to become career/next step (college) ready and explicit links and connections are made regularly in lessons to the world of work. Taking technology further is prominent on the student webpage and in the department area through displays.

Students were seen off site at the Apex centre where they were working on wall papering. The group were taken through marking out the wall but unfortunately were unable to hang any during that lesson. This would have been an opportunity for students to have a go and problem solve even if they struggled, given it was low risk. The students here were able to explain the course structure and what they had to ensure they had as evidence to pass. They enjoyed the course, especially the brick work they had recently completed, speaking with pride about what they had achieved.

Students were also seen in Horticulture theory sessions where progress of their understanding of plant names/identification was the focus. Although the pace was very fast, and quantity of plant names needed on recall was high, students were focused and confident in using support documentation. Questioning was open meaning some students did not need to participate and

could be passive. Directed questioning would have increased accountability for students and enabled the teacher to check all were secure.

Within Graphics students could speak about the grading system on TEAMS and how they receive feedback through this. The class mark sheet for level of completion and progress through the unit was displayed on the large screen. The group were taken through the launch of a new assignment with a focus on the level 1 and 2 pass criteria only. This was done as these criteria need to be met before moving to Merit (the maximum available for the task) but this was not made explicit enough for the class. It is important the class are inspired and aspire to reach top grades but setting the expectations of attainment high and covering merit/distinction criteria also.

Within the Key Stage 4 yr11 Hospitality and Catering course students were revising for their upcoming exam. Some students were very focused and clear on what they had achieved in their coursework and marks they needed in the exam for a distinction/merit. They were proud to show their revision work and talk through how they structure revision. However, this was inconsistent. The booklets supporting revision were very thorough, but the teaching of this content and practising of how to remember and apply in the exam was not precise, this meant that although all had the booklets, a significant number in the class were not actually able to recall the information or explain it. The teacher needed to teach the students to remember the information and how to apply in the exam.

Students within Resistant Materials (yr10) were working independently on the creation toy cars in the style of classic cars. They had planned their design but within a range of precision/detail, each had a research board showing key concepts with commonalities in layout, implying a model/WAGOLL had been shown. Students were able to explain the task set and big picture – aim/outcome. High levels of pride in their practical work was evident and all were keen to explain their vision. Students were positive about the course. Students were less clear on the criteria to achieve various grades and no criteria was visible on the board or in folders.

Expectations:

Across most lessons students were expected (and able to) clearly explain the lesson focus, big picture for the lesson and the task set. They were expected to be part of class discussions with regular questioning. Expectations for full sentence responses however were inconsistent across the team and is an area to develop with students. This would facilitate practise of explanation and justification which is needed within GCSE assignments. The layout of design boards is progressing and expectations for the quality of these is high when models/WAGOLLS used. This should be implemented consistently.

Progress & Feedback:

Feedback for Key Stage 3 was predominately verbal. Staff were consistent at their movement around students to give personalised feedback and advise during practical sessions. Students appreciated this input. Feedback in Key Stage 4 sessions was mostly through TEAMS assignments where students received points depending on the level achieved (pass-distinction) and next step comments to develop assignments.

Although questioning was evident across lessons, opportunities to develop student oracy and precise responses can be enhanced. For example, within Horticulture a considerable amount of precise formal names of plants were needed by the students. This could have been chunked to

reduce cognitive load but also the group could have repeated the word aloud together and then during assessment/recall used whiteboards after each plant for the teacher to check students understanding, and get them to justify why it was that etc. Student talk could have also been demonstrated more within the unpicking of assessment/success criteria. This could have been across disciplines where the criteria could have been independently read, time pair share about the content of the criteria and then paired rehearsal of a summary to share with the group. This would allow the members of staff to assess understanding of expectations and increase accountability of students of their learning and attainment.

Progress was seen in project work from both Key Stages but at an inconsistent pace and level. Where progress was seen clearly, the learning journey was evident and the process of design, create, review was strong. This was especially high in graphics. Students level of planning varied across disciplines and at times with an inconsistent reference to success criteria, students were not clear on how to progress or be challenged further to enhance their product.

Some lessons pace was slow and students not able to 'practise' or problem solve. Extensive teacher input and talk was detrimental to the progress or attainment/achievement of students in a few lessons. Whereas in others the independent progress or students was high and the development of life skills such as drill use was considerable.

Student Voice:

Students enjoy their technology lessons and feel supported by the department. They enjoy the practical sessions and the ability to create a vision. They have appreciated exploring and researching designers with the research boards being an effective way to display their findings. Some students within year 9 were able to explain that because of their Key Stage 3 experience a Technology was their first-choice subject for Key Stage 4. For example, CG said he was choosing 3D design because he had really enjoyed technology in Year 9 and would like to become a designer when he leaves school.

Students felt that behaviour was good in Technology and that the expectations for their behaviour was clear by staff. They acknowledge the experience of the staff and that they really knew their subjects. Within Apex the students were frustrated with the behaviour of 3 individuals that regularly slow the potential practical application time in their sessions but felt their time with DDA was really preparing them for their journey after Park.

Strengths

1. **Curriculum design** effectively builds skills across the disciplines whilst allowing for depth of understanding in each
2. **Subject specialists**- provide passion and strong role models for their disciplines
3. **The plan, practice and apply process** and associated portfolio approach is explicit in most lessons and works effectively as a model across the team. It can be developed by referencing these back and forth (see below)
4. **Student engagement and pride in work** they produce is clear.

Areas for Development

1. **How important is the design process?** What are the steps? Are we consistently teaching | these and checking understanding or simply completing it to get on with the practical? There is variation across teachers for this, with all doing the design process but most leaving planning in books once students move on to practical and not referring to it.
2. **Big Picture**- this is not explicit across all classes. They know the process mostly but ends of lessons are sometimes tidying up and packing away, not reviewing learning and next steps. Lessons must be tied back to the big picture
3. **Precision of the teaching of theory.** The teaching and this element must be given the same status as the practical and the practicing of remembering this knowledge and associated process is important to ensure it is mastered before going on to application. You have very detailed booklets to support exam and coursework- how are students being taught to use them?

Actions

1. **Design process.** This is in place re planning but not always given status in lessons. Agree dept expectations of where planning is and how it is used during practical. Dept learning walks- DPa models the practise explicitly for the team. All teachers need to do this.
2. **Big picture** : This should be shared frequently with students and new learning must be tied back to this. Developing a set of key questions to be used by all to support students and teachers in linking to this would help.
3. **Dept learning walks focussing on AFL** and the ways in which all model theory as well as practical to check and secure understanding over time. Agree set of 3-5 activities all use to
a) ensure precision re expected responses b) practise retrieval and correct misconceptions

The Park Perfect Technologist!

Work safety

Patient

Creative

Apply knowledge in-
to real life situations

Knowledgeable

Adapt to solve
problems

Technical Terms
used

Refinement

Problem Solver

Discover for them-
selves

Imaginative

Passionate

Mastery is doing something well!

Mastery is about rectifying mistakes well!

Mastery is about understanding the importance off formal training.

How do they think?

- Think outside the box
- Creatively and Imaginatively
- Verbal application when conducting processes
- Understanding that there is not always one specific way to get the result
- Think of the best way to get a result

How do they behave?

- Safely
- Well to enable the learning of others and themselves
- Confidently
- Respectfully
- Using their problem solving skills to develop
- Questioning themselves on the design process
- Attentive

How do they tackle problem?

- I can follow the Design process to come up with a solution to a problem. I will research design and evaluate.
- Optimistic to get a solution
- Level headed
- Calm and collected

How do they write

- Using correct terminology
- Using a Framework
- Being able to evaluate
- Content driven with explanations of why
- Summarise in own words
- Writing for audience and purpose
- Drafting and Redrafting

Which experts/genres/events/individuals are they influenced by?

- Jamie Oliver
- James Dyson
- Alexander McQueen
- Steve Jobs
- Current public faces.

How do they speak?

- Confidently using Technological Terms
- Precisely and being able to explain themselves well.
- I am working sensibly and safely as I am using the correct equipment
- What problem can I solve?
- Which type of risk assessment shall I choose?
- What does the Of the future look like?
- I am using the following routine
- I am using thislearning routine
- I am able to observe techniques to learn
- I am able to adapt techniques depending on the material
- I am using my initiative by thinking for myself to find a solution to a problem
- I am able to use technological specific learning routine: observing, questioning, formulating, applying, testing and evaluating.
- I have observed practical demonstrations, asked questions why, worked out the best method, applied this method, tested it and evaluated the outcome.
- ...

Great Learners in Design and Technology

- Think about what you already know.
- Imagine the outcome and predict how the task will look and feel.

- Apply your skills and knowledge.
- Observe what is happening in the moment.

- Test and evaluate your work and compare it to the prediction.
- Respond to feedback and modify your approach.
- *Reflect on your work, ready for examinations and assessments*

Design and Technology prepares pupils to engage with rapidly changing technologies as well as challenging current designs so that students can creatively improve standards and solve real life problems. Our aim is to provide a rich and challenging curriculum that ensures all pupils will have the opportunity to produce excellent work by pushing their own boundaries and exploring their creativity. Design and Technology teaches students to learn about a wide range of materials, processes and manufacturing techniques. Pupils will become proficient in joining materials, developing drawing techniques, critiquing designed products and create effective products, dishes and outcomes. Design and Technology enables our students to combine practical skills with an understanding of aesthetics, social, environmental issues functional and industrial practices.

Year 7 Design and Technology

D. Payne
Head of Design & Technology

This term you will be learning...

In Design and Technology

How to make a Phone holder, this improves your practical skills and helps you to understand product development.

In Catering

How to bake different products and also develop your Recipe and Time planning abilities as well as an introduction to Hospitality.

In Graphics

How to research into a designers work, analyse their work and create your own version of this design as well as learning graphical drawing skills.

[Isambard Kingdom Brunel Video Link](#)

Year 7 Design and Technology at Park is designed to enable our students to make a successful transition from Key Stage 2. Students will study three main areas. Our Core curriculum where students are learning the foundations of the subject. Design and Technology where students are learning the design process and health and safety legislation whilst using new equipment. They will also study Food and Catering including health and hygiene basics and cooking skills whilst some will be developing their understanding of Horticulture.

Year 8 Design and Technology

D. Payne
Head of Design & Technology

This term you will be learning...

In Design and Technology

How to make a wooden helicopter, this improves your practical skills and helps you to understand product development.

In Catering

How to bake different products and also develop your Recipe and Time planning abilities as well as an introduction to Hospitality.

In Graphics

How to research into a designers work, analyse their work and create your own version of this design as well as learning graphical drawing skills.

Year 8 Design and Technology students' study Design and Technology, Hospitality and Catering and Graphics. This is a skills-based year where students will design and create a few products as well as learn new cooking skills. The aim of this year is to allow students to practice skills whilst trying to refine their work to improve its quality. There is a larger emphasis on the theoretical work to ensure that students are fully prepared for GCSE but we are fully supportive of teaching practical skills for life.

Year 9 Design and Technology

D Payne
Head of Design & Technology

This term you will be learning...

In Design and Technology

How to Research effectively and apply that research into making a product. The skills that you will learn are Researching, 3D drawing, Practical Application and Using recycled materials.

In Catering

How to create successful timeplan that takes into consideration effective contingency planning. You will also have an introduction to Hospitality.

In Graphics

How to research into a designers work, analyse their work and create your own version the this design as well as learning graphical drawing skills.

Year 9 Design and Technology students' study Design and Technology, Graphics and Hospitality and Catering. This is another skills-based year but where students try to master the skills learnt in year 7 and 8. This will also be an opportunity to learn new higher-level skills to prepare them for their GCSE years. The main aim of this year is to allow students to have time to practise and really refine their skills to develop their final outcomes and appreciate the need for a quality product. There is a larger emphasis on three areas for DT. They are Research – Analyse – Respond. This will support their practises in GCSE Art and Design. Students learning construction will learn skills for life as well as preparing them for Level 2 Construction in Multi-trades. Dishes cooked in Catering will be presented to a higher standard to ensure that all health and hygiene rules apply in more complex dishes. This preparation will allow students to succeed in their vocational qualification in Hospitality and Catering.

Scheme of Work - Module Outlines

YEAR

MODULES – including CONTROLLED ASSESSMENT 30% Theory, 30% Practical, 40% Examination

11

11					
UPON COMPLETION OF MODULE 1 – 25	EXPLAIN FACTORS TO CONSIDER WHEN PROPOSING DISHES FOR A MENU				
CONTROLLED ASSESSMENT UNITS	LO2 AC 2.1 MERT	LO2 AC 2.2 PASS	LO2 AC 2.3 MERT	LO2 AC 2.4 DISTINCTION	PLAN PRODUCTION OF DISHES FOR A MENU. Time Plan. Sequencing, Timings, Method, Special Reminders, Contingencies, Ingredients List, Equipment List, Mise En Place, Cooking, Cooling, Hot Holding, Completion, Serving, Waste, Quality Points, Storage, Health Safety and Hygiene
LO1 AC 1.1 MERT DESCRIBE THE FUNCTIONS OF NUTRIENTS IN THE HUMAN BODY. Nutrients: Protein, Fat, Carbohydrate, Vitamins, Minerals, Water, Dietary Fibre (NSP)	Factors: Time of year e.g. Seasonality of commodities, Seasonal Events, Skills of Staff, Equipment Available, Time available, Type of Provision, Finance, Client Base	EXPLAIN HOW DISHES ON A MENU ADDRESS ENVIRONMENTAL ISSUES Dishes: Preparation and cooking Methods, Ingredients used, Packaging Environmental issues. Conservation of Energy and Water, Reduce, Reuse, Recycle, Sustainability, Food Miles	EXPLAIN HOW MENU DISHES MEET CUSTOMER NEEDS Needs: Nutritional, Organoleptic, Cost	LO3 AC 3.1 DISTINCTION USE TECHNIQUES IN PREPARATION OF COMMODITIES Techniques: Weighing and Measuring Chopping, Shaping, Peeling, Whisking, Melting, Rub-in, Sieving Segmenting, Slicing, Hydrating Blending Commodities: Poultry, Meat, Fish, Eggs Dairy Products, Cereals, Flour, Rice Pasta, Vegetables, Fruit, Soya Products	LO3 AC 3.2 MERT ASSURE QUALITY OF COMMODITIES TO BE USED IN FOOD PREPARATION Quality: Smell, Aroma, Touch, Storage, Packaging
LO1 AC 1.2 DISTINCTION COMPARE THE NEEDS OF SPECIFIC GROUPS. Specific Groups: Different life stages – Childhood, Adulthood, Later Adulthood Special Diets: Medical Conditions, Activity Levels	LO3 AC 3.3 DISTINCTION USE TECHNIQUES IN COOKING OF COMMODITIES Techniques: Boiling, Blanching, Poaching, Braising, Steaming, Baking, Roasting, Grilling, Frying, Chilling, Cooling, Hot holding.	LO3 AC 3.4 DISTINCTION COMPLETE DISHES USING PRESENTATION TECHNIQUES Presentation Techniques: Portion Control, Position on serving dish, Garnish, Creativity	LO3 AC 3.5 MERT USE FOOD SAFETY PRACTISES In relation to preparation and cooking of commodities and in relation to use of equipment	LO4 AC 4.1 DISTINCTION EXPLAIN THE FUNCTIONS OF NUTRIENTS IN THE HUMAN BODY. Nutrients: Protein, Fat, Carbohydrate, Vitamins, Minerals, Water, Dietary Fibre (NSP)	LO4 AC 4.2 DISTINCTION COMPARE THE NEEDS OF SPECIFIC GROUPS. Specific Groups: Different life stages – Childhood, Adulthood, Later Adulthood Special Diets: Medical Conditions, Activity Levels
LO1 AC 1.3 MERT EXPLAIN THE CHARACTERISTICS OF UNSATISFACTORY NUTRITIONAL INTAKE. Characteristics: Visible, Non- Visible Unsatisfactory: Nutritional Deficiencies, Nutritional Excesses	LO4 AC 4.3 DISTINCTION EXPLAIN THE FUNCTIONS OF NUTRIENTS IN THE HUMAN BODY. Nutrients: Protein, Fat, Carbohydrate, Vitamins, Minerals, Water, Dietary Fibre (NSP)	LO4 AC 4.4 DISTINCTION COMPARE THE NEEDS OF SPECIFIC GROUPS. Specific Groups: Different life stages – Childhood, Adulthood, Later Adulthood Special Diets: Medical Conditions, Activity Levels	LO4 AC 4.5 DISTINCTION EXPLAIN THE FUNCTIONS OF NUTRIENTS IN THE HUMAN BODY. Nutrients: Protein, Fat, Carbohydrate, Vitamins, Minerals, Water, Dietary Fibre (NSP)	LO4 AC 4.6 DISTINCTION COMPARE THE NEEDS OF SPECIFIC GROUPS. Specific Groups: Different life stages – Childhood, Adulthood, Later Adulthood Special Diets: Medical Conditions, Activity Levels	LO4 AC 4.7 DISTINCTION EXPLAIN THE FUNCTIONS OF NUTRIENTS IN THE HUMAN BODY. Nutrients: Protein, Fat, Carbohydrate, Vitamins, Minerals, Water, Dietary Fibre (NSP)
LO1 AC 1.4 PASS EXPLAIN HOW COOKING METHODS IMPACT ON NUTRITIONAL VALUE OF FOOD Cooking Methods: Boiling, Steaming, Baking, Grilling, Stir- Fry, Roasting, Poaching	LO4 AC 4.8 DISTINCTION EXPLAIN THE FUNCTIONS OF NUTRIENTS IN THE HUMAN BODY. Nutrients: Protein, Fat, Carbohydrate, Vitamins, Minerals, Water, Dietary Fibre (NSP)	LO4 AC 4.9 DISTINCTION COMPARE THE NEEDS OF SPECIFIC GROUPS. Specific Groups: Different life stages – Childhood, Adulthood, Later Adulthood Special Diets: Medical Conditions, Activity Levels	LO4 AC 4.10 DISTINCTION EXPLAIN THE FUNCTIONS OF NUTRIENTS IN THE HUMAN BODY. Nutrients: Protein, Fat, Carbohydrate, Vitamins, Minerals, Water, Dietary Fibre (NSP)	LO4 AC 4.11 DISTINCTION COMPARE THE NEEDS OF SPECIFIC GROUPS. Specific Groups: Different life stages – Childhood, Adulthood, Later Adulthood Special Diets: Medical Conditions, Activity Levels	LO4 AC 4.12 DISTINCTION EXPLAIN THE FUNCTIONS OF NUTRIENTS IN THE HUMAN BODY. Nutrients: Protein, Fat, Carbohydrate, Vitamins, Minerals, Water, Dietary Fibre (NSP)
These units must be complete by the controlled assessment deadline date.					
Controlled Assessment PRACTICAL examination day					
EXAMINATION ASSESSMENTS					
LO1 HOSPITALITY AND CATERING INDUSTRY Types of provider, Types of service, Commercial establishments, Non- commercial catering establishments, Services provided, Suppliers, where hospitality is provided at non-catering venues, Standards and ratings, Job roles within the industry (management, kitchen brigade, front of house, housekeeping, administration)		LO1 REQUIREMENTS Supply and demand (availability of trained staff, seasonality, location) Jobs for specific needs Rates of pay, Training, Qualifications and experience, Personal attributes		LO1 WORKING CONDITIONS Different types of employment contracts, working hours, Rates of pay, Holiday entitlement, Remuneration (tips, bonus payments, rewards)	
LO2 CUSTOMER Leisure, Business/Corporate, Residents.		LO2 REQUIREMENTS Customer needs, Customer expectations, Customer trends, Equality, Customer rights		LO3 RESPONSIBILITIES Of employees, of employers, Health and Safety at Work Act, Reporting of Injuries, Diseases and Dangerous Occurrences, Regulations (RIDDOR), Control of Substances Hazardous to Health Regulations (COSHH), Manual Handling Operations Regulations, Personal Protective Equipment at Work Regulations (PPER)	
LO3 RISKS To health, To security, Level of risk (low, medium, high) in relation to employers, employees, suppliers, and customers		LO4 CAUSES Bacteria, Microbes, Chemicals, Metals, Poisonous plants, Allergies, Intolerances		LO4 EHO Enforcing environmental health laws, responsibilities, inspecting business for food safety standards, follow up complaints, follow up outbreaks of food poisoning, collecting samples for testing, giving evidence in prosecutions, Maintaining evidence, Submitting reports	
LO4 LEGISLATION Food Safety Act, Food Safety (General Food Hygiene Regulations), Food Labelling Regulations		LO4 FOOD POISONING Common types Campylobacter, Salmonella, E-coli, Clostridium perfringens, Listeria, Bacillus cereus, Staphylococcus aureus		LO4 SYMPTOMS Visible symptoms, Signs, Non-visible symptoms, Length of time until symptoms appear, Duration of symptoms	
LO4 FOOD INDUCED ILL HEALTH Intolerances, Allergies, Food poisoning		LO5 HOSPITALITY AND CATERING PROVISION Review Summarise different options, Advantages/disadvantages of different options, use of supporting information which justify how this meets specified needs Recommend Propose ideas, justify decisions in relation to specified needs, Use of supporting information e.g. structured proposal		CONTROLLED ASSESSMENT GRADING PASS L1 PASS L2 MERT DISTINCTION EXAMINATION ASSESSMENT GRADING PASS L1 30/90 PASS L2 45/90 PASS L2 45/90 MERT 55/90 DISTINCTION 65/90 YOU MUST OBTAIN A MINIMUM GRADE IN EVERY ASPECT TO ACHIEVE THIS QUALIFICATION

Horticulture

Scheme of Work Lesson Outline

Some module progression
may vary with the weather

YEAR	AUTUMN	SPRING	SUMMER
7	<p>Module 1 a) The importance of plants in prehistoric Hampshire. b) Plants and planting locally? c) WW2 and 'Dig for Victory'</p> <p>Module 2 Health and Safety on site Understanding the key factors of health and safety on the horticultural sites Theory</p> <p>Module 3 Theory/Practical Plant names and the Binomial system</p> <p>Module 4 PRACTICAL/theory Soil 1 Structure and texture – pH of soil, Nutrients and</p> <p>Module 5 Practical Soil 2 Primary and secondary cultivation (digging methods) Mulching</p> <p>Module 6 Practical Vegetative propagation 1: Leaf petiole/ Leaf lamina softwood stem cuttings: Hardwood cuttings After care</p>	<p>Module 7 Practical Propagation from Seeds (open ground- Containers) After care</p> <p>Module 8 Practical Pricking out, thinning and weeding – Watering Plant bed after care</p> <p>Module 9 Theory/Practical Compost: How it works - Types of bins - Leaf mould - Wormeries</p> <p>Module 10 Theory/Practical Vegetative propagation 2: Leaf cuttings/lamina – Soft tip cuttings Semi ripe Hardwood cuttings Root cuttings After care</p>	<p>Module 11 Practical Planting and establishing: Potting on... Planting out... Staking and tying – hanging baskets - Watering and mulching – Feeding - Protecting - Watering and mulching After care</p> <p>Module 12 Practical/Theory Pests and diseases Identification of a range of common pests and diseases and dealing with them safely</p> <p>13 Practical Wildlife: Benefits of attracting Providing habitats and shelters</p> <p>Module 14 Theory/Practical Enterprise: Produce Flowers Plants</p>

Horticulture

Scheme of Work Module Outline

Some module progression may vary with the weather

YEAR	AUTUMN	SPRING	SUMMER
8	<p>1A Identity with Horticulture</p> <p>Module 1 Health & Safety identify and plan for risks in a working garden environment.</p> <p>Module 2 Binomial system Knowing how plants are botanically named, - identify a range of plants,</p> <p>Module 3 Soil Testing reasons for soil testing-prepare soil samples for simple testing - understanding results in pH values</p> <p>Module 4 Preparing soil for sowing and planting Use tools and equipment to preparing soil- Transporting organic matter- Cultivate soil by hand.</p>	<p>Module 5 Assist with the propagation of plants from seed Prepare and propagate plants from seed - Sow seed safely inside and outside in prepared pots and beds. Pricking out seedlings</p> <p>Module 6 Vegetative propagation: Taking a range of plant cuttings to produce new plants Collecting propagation material for the vegetative propagation of plants - preparing propagation materials - establishing propagation materials in a growing environment-</p> <p>Module 7 Friendly organisms Bees, worms and other insect friends:</p>	<p>Module 8</p> <p>Assist with planting and establishing plants Carrying out planting of pre-grown plants in the ground or in bigger pots/hanging baskets</p> <p>Module 9 Pests and diseases Identification of a range of common pests and diseases and dealing with them safely</p> <p>Module 10 Plant care Aftercare of plants. watering and feeding Pruning</p>

Horticulture: Level 1 Cert...in Practical Horticulture

Scheme of Work Module Outline

Some module progression may vary with the weather

YEAR	AUTUMN	SPRING	SUMMER
9	<p>Module 1 Health & Safety identify and plan for risks in a working garden environment.</p> <p>Module 2 Unit 101 Preparing soil for sowing and planting Credits: 3</p> <p>Module 3 Unit 104 Water a bed, border or area of plants in containers Credits: 2</p> <p>Module 4 Unit 102 Plant container grown subjects Credits: 3</p> <p>Module Option Binomial system Knowing how plants are botanically named, - identify a range of plants</p> <p>-</p>	<p>Module 5 Unit 103 Prepare soil and apply organic mulch Credits: 2</p> <p>Module 6 Unit 122 Sow seeds outdoors in drills Credits: 2</p> <p>Module 7 Unit 107 Determine Soil pH with colour indicator test kit. Credits:2</p> <p>Module 8 Unit 125 Propagate by stem cuttings Credits:2 Optional</p>	<p>Module 9 Unit 123 Sow seeds indoors in containers Credits:2</p> <p>Modules 10 Unit 124 Pricking Seedlings out</p> <p>Modules 11 Unit 150 Identify trees and shrubs Credits:2</p>

18 Credits for City and Guilds Level 1 Certificate in Practical Horticulture 7574-11

Horticulture: Level 1 Certificate in Practical Horticulture

Scheme of Work Module Outline

Some module progression
may vary with the weather

YEAR	AUTUMN	SPRING	SUMMER
10	<p>Module 1 Health & Safety identify and plan for risks in a working garden environment.</p> <p>Module 2 Unit 101 Prepare for Sowing or planting under supervision Credits: 3</p> <p>Module 3 Unit 102 Plant container grown plants Credits: 3</p> <p>Module 4 Unit 103 Prepare Soil and apply organic mulch Credits: 2</p> <p>Module 5 Unit 104 Water a bed, border or area of plants in containers Credits: 2</p>	<p>Module 6 Unit 107 Determine soil pH with colour indicator test kit under supervision Credits: 2</p> <p>Module 7 Unit 122 Sow seeds outdoors in seed drill by hand Credits: 2</p> <p>Module 8 Unit 123 Sow seeds indoors in containers Credits: 2</p>	<p>Module 9 Unit 150 Identification of a range of trees and shrubs Credits: 2</p> <p>Module 10 Unit 15 Identification of a range of common weeds Credits: 2</p> <p>Module 11 Identification of a range of indoor plants Credits: 2</p>

18 credits from the Level 1 Certificate +23 credits in this plan to make 41 credits.

A total of 37 credits is needed to reach a Level 1 Diploma 7574-11

Horticulture: Level 2 Award and/or Certificate
